Event	How it should work
Engine Full	Better option:
	Based on forklifts speed (variable?): RPM parameter 1k-8k
	If throttle held down: load parameter 2000 (plays onload), if not held down: load parameter -2000 (plays offload)
	Damage parameter 0-100 based on damage in game.
	Alternative for speed: If throttle held down: RPM parameter changes immediately to 8k
	If throttle not held down: RPM parameter changes immediately to 1k
	The alternative option needs simple alteration in FMOD, so let me know if this is the one you'll end up using
Forks_up	Forks up button held down: Play event (not looping!)
Forks_down	Forks down button held down: Play event (not looping!)
Forks_Impact_ShelfMetal	When forks collide with metal material: Play event (not looping!)
	Event should to be played at the impact location
	Would be optimal to change volume according to impact strength.
WoodCrateBreak	When a crate breaks on impact: Play Event
	Would be optimal if impact strength would determine parameter "ImpactStrenght" to be 1 if low, and 2 if high.
	Alternatively can use volume adjustment based on impact strength same as with metal impact sound.
Clock_Card	Whatever logic in game for using the clock card machine, so e.g. when clicking on a mission: Play event (not looping!)

When non-destructive collision with a crate: Play event. Again, either volume based on impact strength, or a parameter based on impact strength as with crate break. Should be triggered at the impact location Place to the location of Ventilation shafts /aircon, whatever it might be. Make sure it's autoplayed when level starts. This will loop forever. I will see attenuation settings when I get to test it. Play when clicking a menu item Currently I've added a woosh as a tail, which I think sounds nicer, but might be odd for menu changes like vsync on/off, key binds etc, so let's look at it later again. Mouse_Hover Play when hovering over a menu item Engine_2_Full Same as the other engine When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) Forks_Down_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) TimelsRunningOut Should Start playing exactly when level time reaches the last 25 seconds Opening_Menu (under music) Start playing when in menu (parameter "in menu" 1=yes 0=no)	Conveyor_Belt	Place to the location of the belt. Make sure it's on "auto play" so that it starts playing when level starts. I will see attenuation settings when I get to test it.
/aircon, whatever it might be. Make sure it's autoplayed when level starts. This will loop forever. I will see attenuation settings when I get to test it. Mouse_Click Play when clicking a menu item Currently I've added a woosh as a tail, which I think sounds nicer, but might be odd for menu changes like vsync on/off, key binds etc, so let's look at it later again. Mouse_Hover Play when hovering over a menu item Engine_2_Full Same as the other engine When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) Forks_Down_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) TimeIsRunningOut Should Start playing exactly when level time reaches the last 25 seconds Opening_Menu (under music)	WoodCrate_Normal_Impact	Play event. Again, either volume based on impact strength, or a parameter based on impact strength as with crate break.
Currently I've added a woosh as a tail, which I think sounds nicer, but might be odd for menu changes like vsync on/off, key binds etc, so let's look at it later again. Mouse_Hover Play when hovering over a menu item Engine_2_Full Same as the other engine Forks_Up_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) Forks_Down_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) TimeIsRunningOut Should Start playing exactly when level time reaches the last 25 seconds Opening_Menu (under music) Start playing when in menu (parameter "in		Place to the location of Ventilation shafts /aircon, whatever it might be. Make sure it's autoplayed when level starts. This will loop forever. I will see attenuation settings when I get to test it.
Mouse_Hover Engine_2_Full Same as the other engine Forks_Up_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) Forks_Down_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) TimeIsRunningOut Should Start playing exactly when level time reaches the last 25 seconds Opening_Menu (under music) Start playing when in menu (parameter "in	Mouse_Click	Currently I've added a woosh as a tail, which I think sounds nicer, but might be odd for menu changes like vsync on/off, key binds
Forks_Up_Tail When let go of fork up button, play event. (will be a quick sound for tail, so it doesn't just end abruptly) Forks_Down_Tail When let go of fork up button, play event.
